

Poultry

Chicken output for the week ending June 3rd was a whopping 4.5% larger than the same week last year but down substantially from the previous week due to the Memorial Day holiday. The six-week total for chicken production stands at 3% better than 2016 which is much better than the near 2% decline that occurred during April. Chicken producer margins have improved considerably this spring which could encourage year over year gains in chicken output in the coming months. However, the USDA is signaling that materially better chicken output expansion vs. 2016 may not occur until the fall. Chicken breast and wing prices remain historically inflated. But prices for both segments could be notably lower later this year.

Product Description	Market Trend	Supplies	Price vs. Last Year
Whole Birds WOG-Nat	Decreasing	Good	Higher
Wings (jumbo cut)	Increasing	Good	Higher
Wing Index (ARA)	Increasing	Good	Higher
Breast, Bnless Skinless NE	Decreasing	Good	Higher
