

Poultry

For the week ending January 27th, chicken output was up 12.8% from the prior week and was 2.1% more than last year. The six-week moving average for chick placements was 1.7% bigger than last year which signals that modest chicken production gains will occur in the near-term. The ARA Chicken Wing Index last week was the second lowest for the date in seven years. Wing prices usually peak the week prior to the Super Bowl. Further chicken wing price declines may be upcoming. The ARA Chicken Wing Index usually drops 13.5% from now until bottoming in early May. Chicken tender prices are firming. The five-year average move for the ARA Chicken Tender Index during the next 15 weeks is an increase of 30.3%.
