Pork - Pork production continues to seasonally increase, up 1.3% from the week prior, but just 0.2% better than last year. Still, year-over-year increases in output are anticipated to escalate, as Tuesday notched the largest single-day hog harvest on record, while larger schedules are still looming. Pork prices continue to decline in response to larger production, with bellies and hams leading the losses as of late. Further price depreciation is expected for pork bellies, but remain wary of rising exports which could support prices deeper into the fall.

Product Description	Market Trend	Supplies	Price vs. Last Year
Live Hogs	Decreasing	Ample	Higher
Sow	Decreasing	Ample	Higher
Belly (bacon)	Decreasing	Good	Higher
Sparerib(4.25 lb & down)	Decreasing	Good	Lower
